

Supplemental figure 3. RB expression is not needed for CIP2A-depletion induced senescence

A) RT-PCR analysis of mRNA-expression of B55α from either control (scrambled, SCR) or B55α siRNA transfected and B56β from either control (scrambled, SCR) or B56β siRNA transfected MCF-7 cells. Shown is mean +SEM of two independent experiments. B) SA-beta-gal staining from MCF-7 cells co-transfected with indicated siRNAs. Cells stained with SA-beta-gal 5 days after transfection. Shown is mean +SEM from a representative experiment. C) MCF-7 cells co-transfected with indicated siRNAs. Western blot analysis of Rb 3 days after transfection.
